About

Software Engineer with 10+ years of experience designing and building scalable web, mobile, AI-powered, and enterprise platforms. Experienced across the full product lifecycle—from architecture and backend services to modern frontend experiences and cross-platform mobile applications. Proven track record of delivering products in enterprise, healthcare, banking, gaming, legal-tech, and e-commerce domains for organizations including Microsoft, Tredence, and high-growth startups. Specialized in React, Next.js, Flutter, NestJS, FastAPI, TypeScript, and cloud-native architectures, with recent experience leading the development of AI-powered analytics platforms, conversational experiences, and scalable micro-frontend ecosystems. Passionate about building high-quality products, driving technical architecture, and solving complex engineering challenges through clean, maintainable, and user-focused solutions.

Tredence Analytics

Aug 2025 –

Present

Manager - Application

Development

- Leading application development for the Intelligence Hub platform, an AI-powered analytics platform designed to replace traditional dashboarding solutions with conversational and intelligent user experiences.
- Led delivery of the first production use cases on the V1 platform, driving frontend architecture, technical design, sprint execution, and engineering delivery.
- Designed the widget framework enabling reusable visualizations through configuration-driven widgets combining visualization metadata with query definitions.
- Contributed to the architecture of a JSON-to-SQL conversion engine that transformed widget configurations into executable analytical queries across multiple business domains.
- Implemented AI-powered insights generation using Large Language Models to transform analytical data into actionable business narratives.
- Designed scalable personalization capabilities including widget layouts, dashboard customization, page-level personalization, and reusable widget filters.
- Architected the Security Module for Intelligence Hub V2 including RBAC, publishing workflows, approval pipelines, and onboarding of Micro UIs and MCP servers.
- Contributed to the platform architecture for Micro UI Registry, MCP Registry, reusable component libraries, widget infrastructure, personalization services, and developer templates.

- Designed the Page Context architecture by capturing user interaction events to provide contextual awareness for conversational AI experiences.
- Built an automated UI validation framework using Playwright and Amazon Athena to validate analytical results against backend warehouse data.

Independent Product Development & Consulting

May 2025 –
Jul 2025

Founder / Consulting Engineer

- Built Smart Slot AI, a WhatsApp-first appointment scheduling platform featuring intelligent booking flows, provider dashboards, and conversational automation.
- Developed Zap, a commerce platform enabling businesses to receive, manage, and track customer orders directly through WhatsApp.
- Contributed to enterprise application development for GreyOrange across Flutter and web-based initiatives.
- Designed scalable backend services using NestJS, MongoDB, and WhatsApp Business APIs while integrating AI capabilities into multiple products.

WhatsApp API

OpenAI

Microsoft

Jan 2022 – May 2025

Software Engineer II

- Developed features across Microsoft Teams, Outlook Web App, and Microsoft Copilot, contributing to experiences used by millions of users worldwide.
- Built Action Message Extensions using Brokered Architecture, simplifying third-party integrations and enabling extensible actions across Microsoft 365 applications.
- Enabled AI-powered Copilot experiences within Teams and Outlook, integrating conversational workflows that improved productivity and streamlined common tasks.
- Provided production support for Microsoft 365 services, diagnosing and resolving high-priority issues while maintaining service reliability and performance.

TypeScript

Azure

Microsoft 365

Copilot

Game.tv (BlueStacks)

Sep 2019 – Jan 2022

Member of Technical Staff

- Contributed to scaling the Game.tv mobile platform beyond one million downloads by building reliable backend services and cross-platform mobile features.
- Developed profile service APIs using FastAPI, improving backend performance and request validation.
- Built tournament automation workflows covering player registration, bracket generation, match progression, and prize distribution.
- Implemented backend integrations for an NFT marketplace, including wallet connectivity and digital asset management.
- Designed scalable player interaction systems supporting real-time updates and enhanced player engagement.

Times Internet

Dec 2018 – Sep 2019

UI Engineer

- Improved performance across high-traffic news and media platforms by implementing lazy loading, code splitting, and frontend optimization techniques.
- Refactored legacy React applications, reducing bundle sizes and improving overall application performance.
- Collaborated with product and SEO teams to improve page discoverability and search performance.
- Built reusable UI components and strengthened the shared design system used across multiple Times Internet products.
- Improved client-side stability through proactive monitoring and robust error handling.

Sirion Labs

Mar 2018 – Dec 2018

Software Engineer

- Modernized the UI of the enterprise Contract Lifecycle Management platform using React.
- Built reusable component libraries with React and TypeScript to accelerate feature development.
- Integrated REST APIs supporting contract management, approval workflows, and document versioning.
- Collaborated with product managers and QA teams to deliver enterprise features for global customers.

Newgen Software

Jun 2016 – Dec 2017

Software Engineer

- Developed Cordova-based hybrid banking applications supporting digital account opening and customer onboarding.
- Built Windows desktop utilities including digital signature tools, document processing workflows, and image management applications.
- Designed a custom camera capture module to streamline document upload and KYC verification processes.
- Migrated legacy desktop functionality to AngularJS-based web applications, improving maintainability and user experience.
- Worked closely with QA and deployment teams to deliver secure banking software for enterprise clients.

Selected Work

A selection of enterprise platforms, AI products, and software systems I've designed and delivered across Microsoft, Tredence, GreyOrange, Game.tv and Mindfusion Studios.

Intelligence Hub

Aug 2025 – Jun 2026

Enterprise AI Analytics Platform

Tredence Analytics • Manager - Application Development

Led engineering delivery of Intelligence Hub, an AI-powered enterprise analytics platform designed to replace traditional BI dashboards with conversational analytics, reusable widget frameworks, AI-generated insights, and Micro UI architecture. Delivered production use cases while evolving the platform into a reusable framework supporting 30+ users in Phase 1 and 100+ users in Phase 2.

Smart Slot AI

May 2025 – Jul 2025

Healthcare Scheduling Platform

Mindfusion Studios • Founder & Lead Engineer

Designed and built a multi-tenant healthcare appointment platform enabling clinics and practitioners to manage bookings directly through WhatsApp using conversational scheduling, provider dashboards, and workflow automation.

React

NestJS

MongoDB

Twilio

WhatsApp

Zap

May 2025 – Jul 2025

WhatsApp Commerce Platform

Mindfusion Studios • Founder & Lead Engineer

Built a conversational commerce platform enabling businesses to receive, manage and fulfil customer orders entirely through WhatsApp with dedicated merchant dashboards and order management workflows.

React

NestJS

MongoDB

Twilio

Game.tv Tournament Platform

Sep 2019 – Jan 2022

Esports Tournament Platform

Game.tv • Senior Software Engineer

Developed a large-scale esports tournament platform enabling players to create tournaments, automate brackets, manage competitions, and distribute rewards. The application exceeded 100K downloads on iOS while supporting community-created tournaments.
